

## Website and server monitoring made easy.

CheckMySite.com makes website and server monitoring easy. There is no need to install software, either. Just add your website URL or server IP address, and you will be ready. Be the first to know when your website or server is down. We will monitor your website or server 24 hours a day, 365 days a year.

### What we monitor: Your website or server, so you will be the first to know

CheckMySite.com can monitor different protocols such as HTTP, HTTPS, Ping, FTP, Connect, POP3, SMTP, DNS, SQL and MySQL. Moreover, we can monitor a website in the presence or the absence of a specific keyword. In the event of a problem with your site or server, CheckMySite.com can send alerts to your mobile phone or e-mail.

For SMS alerts on your mobile phone we have partnered with many of the leading telecom providers in the USA and Europe to ensure the prompt, reliable delivery of alerts. Additionally, you can specify the people who will receive an alert if a problem occurs. The notification priority is yours to select, too. Just specify it in your account details, and we will take care of the rest.

### How we monitor: A global monitoring network for accuracy and reliability

CheckMySite has monitoring checkpoints in major cities throughout the USA and Canada, as well as the UK, Germany, the Netherlands, Belgium, Sweden, China, Singapore and Australia.

The advantage of our global monitoring network is that CheckMySite.com will perform a double-check to verify the website or server failure quickly, before an alert is sent. Our global checkpoint system is accurate and reliable, so you won't be bothered with false alarms.

## Online reports, e-mail reports and a user-friendly control panel

Our detailed online monitoring reports indicate the performance of your website and/or server during a specific time period, with details that include uptime, downtime and failures. Additionally, we can log the files of all checks performed over the past 30 days. This makes in-depth error analysis easier and cost-effective.

It is easy to keep tabs on your site/server performance too, thanks to our convenient e-mail reports. You and your co-workers can automatically receive a daily, weekly or monthly performance overview, which makes system planning easy as your operation moves forward.

CheckMySite.com features a powerful but user-friendly control panel that lets you define each setting with point-and-click ease. You can add people to your reporting group, and change or increase the sites and servers you want to monitor.

### Why you need our server and website monitoring services

Maximum uptime is essential for any business that operates a website or offers online services. Downtime, of course, will drive away visitors and diminish your market potential. That means a relative increase in costs, because not only will it decrease goodwill but the loss of revenue as well.

Be proactive, with CheckMySite.com. We will alert you immediately in the event your website or server goes down, so you can take action before your business is affected.

### CheckMySite Silver and Gold

As a CheckMySite customer you only need to pay for what you really use. CheckMySite Silver is available for \$160, £99 or €125 per year incl. 1 check, 20 monthly SMS alerts, updates and customer support.

CheckMySite Gold is available for \$419, £258 or €325 per year incl. 3 checks, 20 monthly SMS alerts, updates and customer support.

Both versions will monitor your website or server every 5 minutes. You can purchase additional checks for \$160, £99 or €125. You can also purchase additional SMS alerts.

### Sign up today for a free, four-week trial monitoring service!

CheckMySite.com is pleased to offer a free, four-week trial. Simply complete our online sign-up form, and you will be ready. An e-mail will be sent for the activation of your trial account, and once you have done so, we will start to monitor your website or server immediately. The free trial gives you access to a full-featured service, so you will be able to add checks, receive alerts on your mobile phone or e-mail, and view online reports on the uptime and downtime of your website and/or servers.

With CheckMySite.com you will be the first to know in the event of downtime on your website or server. Moreover, our global network of monitoring points will double-check to verify the existence of a problem, so you won't be bothered with false alarms.

The free trial is 100% safe, too. No credit card details are required, nor will we use your e-mail address for spam. With CheckMySite.com, your personal information will be safe and secure. Go to our website for a free 4 week trial: [www.checkmysite.com](http://www.checkmysite.com).
